Feinpolyamide PA 2200 for EOSINT P

PA2200 is a fine-powder on the basis of polyamide 12. In comparison to standard polyamide 12 PA2200 is characterized by higher crystallinity and higher melting point as result of specific production process. PA2200 contains stabilizers against heat and oxidation.

Short term influence of temperature on mechanical properties

An overview about the temperature dependence of mechanical properties of PA12 can be retrieved from the curves for dynamic shear modulus and loss factor as function of temperature according to ISO 537.

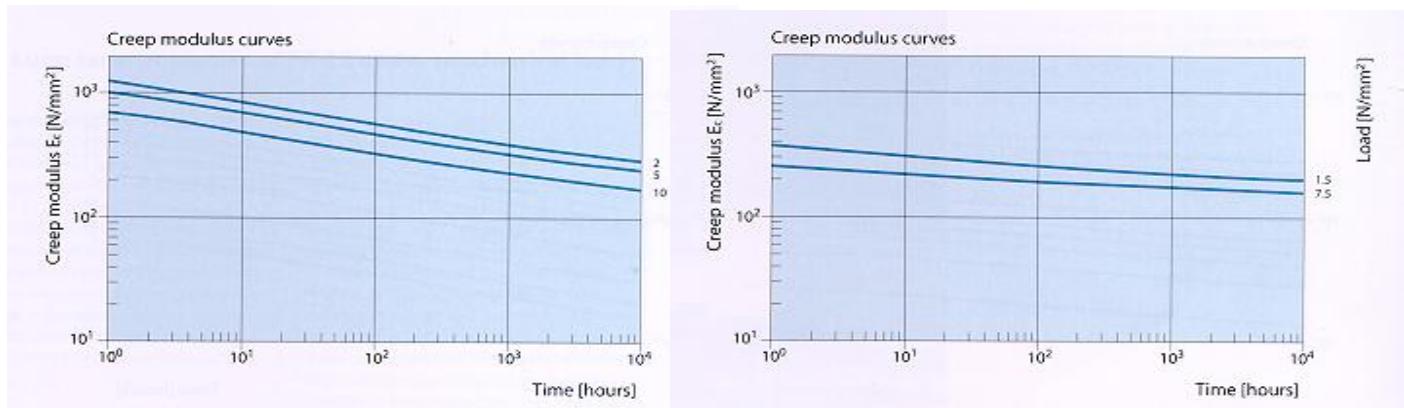

Product Information

In general Polyamid12 – parts show high mechanical strength and elasticity under steady stress in a temperature range from - 40°C till + 80°C. Short time loading of PA12-parts without stress is possible up to 160°C.

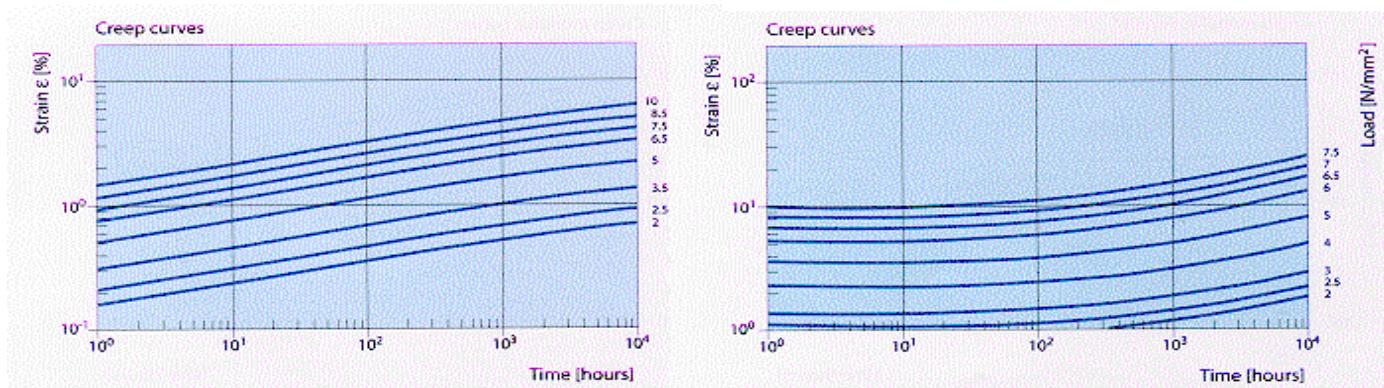

Long term properties under mechanical load and temperature

In general thermoplastics have higher mechanical strength under short term load then under long term load (> 1000 h) as result of creep. This occurs mostly at higher temperatures and leads to a reduction of modulus (creep modulus). Usually the creep resistance (mechanical properties under continuous load) is determined with the uniaxial tensile creep test (DIN 53444) under different loads and temperatures.

Creep modulus curves PA 12 at T = 23°/100°C

Creep elongation curves PA 12 at T = 23°C/100°C

Flammability / Burning Behaviour

Product Information

The powder contains no flame retardants. So PA2200-parts can burn. Fillers like glass intensify flammability as result of wicking.

Flammable gases forms at temperature above 350°C. Combustion in excess air produces CO, CO₂, H₂O and nitrogen containing compounds as end products.

Property	Measurement Method DIN/ISO	Unit	Value
Ignition temperature	DIN 51794	°C	> 350°C

Frictional Properties, Abrasion and Wear

Polyamid 12 is characterized by a low coefficient of friction and by very good abrasion resistance.

Coefficient of sliding friction in dependence of bearing temperature (Lubrimeter test acc. A. Bartel)

Coefficient of sliding friction as function of pressure load (Lubrimeter test acc. A. Bartel))

Abrasion on bearing as function of the sliding distance and PA12-modification (L-GB30/glass spheres; L-GF30-glass fibres)
